

## Appendix Table S2

Occupancy model comparisons for individual species (passerines and woodpeckers) with elevation (elev), red squirrels (resq), and year in the Long Range Mountains, Newfoundland, Canada (2016 and 2017). Each model contains a detection term(s) determined to be the best fit (all include site as a random effect), and an a priori set of occupancy terms. Null model appears in bold for ease of reference. Species included were detected at over 1.5% of surveys.
